CLOUD WEB HOSTING

STANDARD PACKAGE

**Reliable and Secure Shared Cloud Web Hosting
for Your Business Needs**

Your Complete Cloud Solutions Provider

The EtiHAD techShared Cloud Hosting package gives you the opportunity to take advantage of the cutting-edge hosting technologies on an extremely affordable price. With this package you will receive a fully-featured cloud hosting environment with a dedicated fraction of the massive cloud computing power.

The web hosting Industry is changing, No longer should your site reside on a single web server. We utilize the latest cloud hosting and grid layer technologies. Websites are 'Load Balanced' across multiple servers to ensure that individual hardware failures won't affect you. A traffic spike on another website won't affect your site's performance.

Our Redundant cloud Hosting is designed to keep your email and websites always up and running. It is targeted at businesses and consumers who need a very high level of uptime but don't have a large IT budget to spend on complicated load-balanced, multi-server solutions.

With EtiHAD Shared Cloud Hosting, your website is no longer limited to the resources of a single shared server. You now have access to a pool of resources made available by multiple clustered servers. This allows for increased processing power, website availability and reliability to handle any load size or demand your website or applications may encounter.

One of the main benefits of cloud hosting is the fully-redundant infrastructure, down to every server, router and switch. Automatic failover measures are configured at each layer to ensure your website and applications are accessible at all times, even in the event of a single point of failure.

Cloud Server performs seamlessly like an individual, isolated and insulated server. This creates a secured hosting environment for your website and applications, and minimizes the chance of unauthorized access and attacks.

Cloud Server performs seamlessly like an individual, isolated and insulated server. This creates a secured hosting environment for your website and applications, and minimizes the chance of unauthorized access and attacks.

Advanced Security Features **Include**

- Managed Firewalls
- Managed DoD/DDoS Mitigation

STANDARD PACKAGE

\$ 99
ANNUALLY

FREE DOMAIN NAME

Register or Transfer a domain & get everything you need to get started online - absolutely FREE! We provide free domain registration (.Com,.Net, .Org) along with this standard hosting package.

PROFESSIONAL WEB DESIGNS

Design your own dynamic website using our easy to use CMS based (Content Management) Website Builder. You can choose from about 195 professional themes; the Easy Editing with a Drag & Drop Interface helps you Go Live Instantly – you can publish your website in minutes! Don't have time or Skills to use the Website Builder?? No problem, all you have to do is just send an email to our design department about your custom needs. Our website design team will create, host, and update the site absolutely FREE!

RESPONSIVE DESIGN

Responsive design is, in effect, a way in which your website determines what platform (smartphone, tablet, laptop, desktop, wide-screen TV, etc.) it is being viewed on and then displays your interface in the best format for that platform.

UNLIMITED EMAIL ACCOUNTS

Standard Hosting Package includes email access SMTP/POP3/IMAP access web-based email access, blackberry enabled email utilities and tools, online address book mailing lists, vacation auto-responders, folder management sorting and searching, full HTML email support, easy-to-use control panel security and other features, e-mail forwarding, e-mail aliases, virus protection, spam protection and total DNS control.

STANDARD PACKAGE

FREE GMAIL INTEGRATION

We are offering optional free Gmail Integration for your business email. With this free Gmail Integration, you can use Gmail for your business email and still send and receive from yourname@mycompany.com. This is the perfect way to access your business email while using the same advantage of powerful Gmail interface and features.

SEARCH ENGINE OPTIMIZATION (SEO)

We are providing a basic level SEO along with the standard hosting package. You'll get the benefits of our expertise which will fill your site with keywords, semantic search (in-depth content that is user-friendly) and local search engine optimization. These tactics are implemented along with action-driven writing to get you the most traffic to your site and convert traffic to sales.

SOCIAL MEDIA INTEGRATION

Directly connects your website to Social Media websites like Facebook, Twitter, and Google Plus. Increase your online reach.

HIGH AVAILABILITY

By combining higher quality hardware with our true cloud infrastructure and keeping our servers under load, we are able to keep your servers online so that your site is always available. Our shared cloud hosting comes with a 99.9% uptime guarantee!

24/7 SUPPORT

We provide 24/7 ticket, mail support and 8/7 live sales and support chat directly from the ETIHAD data center. Our goal is to provide fast technical support for all customer requests. Our average response time is about 18 minutes.

AUTOMATIC BACKUP

Every Cloud Hosting package includes fully automatic daily data backups. The backup will be made every day, and the backup data will be stored in safety.

SECURITY

Our Shared Cloud Web Hosting performs seamlessly like an individual, isolated and insulated server. This creates a secured hosting environment for your website and applications, and minimizes the chance of unauthorized access and attacks.

CLOUD TECHNOLOGY

Our revolutionary Cloud Web Hosting plans are designed for greater security, reliability, performance, and speed. Shared Cloud Hosting at Etihad is a one-of-a-kind hosting plan with unlimited features and the latest Cloud technology.

HIGH PERFORMANCE

With Etihad Shared Cloud Web Hosting, your website is no longer limited to the resources of a single shared server. You now have access to a pool of resources made available by multiple clustered servers. This allows for increased processing power, website availability and reliability to handle any load size or demands your website or applications may encounter.
